INVESTMENT OBJECTIVE

To provide investors with exposure to the South Africa equities market through the purchase of a JSE listed ETF. The RMB Top 40 ETF portfolio invests in the 40 biggest companies listed on the JSE in proportion to their market capitalisation.

INVESTMENT STRATEGY

The RMB Top40 ETF aims to provide returns linked to the performance of the FTSE/JSE Top 40 Index. The ETF tracks the component equities of this index in proportion to the Index weightings. The FTSE/JSE Top 40 index contains the 40 largest shares in terms of market capitalisation listed on the JSE. The RMB Top 40 ETF pays a quarterly distribution, which is made up of any dividends or interest earned from the underlying shares.

HISTORICAL PERFORMANCE

Source: Bloomberg, RMB

CUMULATIVE PERFORMANCE

	RMB Top40	JSE Top40 Index
3 months	7.54%	7.62%
6 months	8.09%	8.23%
1 year	23.05%	23.36%

WHY CHOOSE AN ETF?

Convenient and cost effective

RMB ETFs are a convenient, cost-effective method to gain market exposure. RMB ETFs allow you to obtain this exposure in an easily tradeable form. ETF units are listed on the JSE and can be traded just like any other share through a stockbroker.

Tracks an index

The asset manager is not mandated, nor incentivised to outperform the index the ETF is tracking. Instead, the goal of the asset manager is to replicate the constituents. The investment is therefore deemed to be passively managed (which is typically more cost effective than an actively managed fund).

Transparent

RMB ETFs are highly transparent in nature - you are able to see exactly which securities make up each ETF, including the weightings and sectors represented within a highly regulated trading environment.

Possible portfolio core

Given their index-based structure, RMB ETFs can also be used as the core of a portfolio to provide a higher likelihood of returns consistent with the market performance of the index being tracked. You are then able to allocate your remaining investment capital to satellite investment opportunities in the pursuit of above market related returns.

PRODUCT PROFILE KEY

CONSERVATIVE PRODUCT PROFILE

This product is suitable if you wish to protect your investment portfolio and aim to generate returns in excess of inflation over time. As a conservative investor, your risk tolerance ranges from low to moderate.

BALANCED PRODUCT PROFILE

This product is suitable if you are looking for an asset allocation and management method aimed at balancing your risk and return. These investments carry more risk than those aimed at capital preservation or current income and are therefore suitable if you have a longer time horizon plus a degree of risk tolerance.

GROWTH PRODUCT PROFILE

This product is suitable for you if you are seeking assets with 'good growth potential'. These investments may be volatile and deliver negative returns at times, but would be suitable if you have a longer time horizon and a higher risk tolerance than investors who invest in a balanced investment product.

AGGRESSIVE GROWTH PRODUCT PROFILE

This is suitable if you expect very high capital growth by taking very high risk. These investments are sometimes viewed as being speculative and you would need to have a much higher risk tolerance than those investing in conservative, balanced or growth products. The higher risk profile of these products means that you may be subject to value fluctuations, including the loss of your invested capital.

DEFINITIONS

TOTAL RETURN:	Total return accounts for two categories of return: income and capital appreciation. Income includes interest paid by fixed income investments, distributions or dividends. Capital appreciation represents the change in the market price of an asset
NAV (NET ASSET VALUE):	This is the total value of assets in the portfolio less any liabilities, divided by the number of shares outstanding
TER (TOTAL EXPENSE RATIO):	This is a measure of the total costs associated with managing and operating an investment fund. These costs consist primarily of management fees and additional expenses such as trust and custody fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets to arrive at a percentage amount, which represents the TER
INDEX:	In the case of financial markets, an index is a theoretical portfolio of assets representing a particular market or a portion of it. Each index has its own calculation methodology and is usually expressed in terms of a change from a base value. Thus, the percentage change is more important than the actual numeric value

DISCLAIMER

RMB CIS MANCO (Proprietary) Limited (Reg No 2006/036970/07) ("CIS manager") is an approved collective investment schemes manager of the RMB Collective Investment Scheme ("RMB CIS"). It is a full member of the Association for Savings and Investment SA ("ASISA").

This document and any other information supplied in connection with the RMB CIS is not "advice" as defined and/or contemplated in terms of the Financial Advisory and Intermediary Services Act, 37 of 2002 ("the FAIS Act") and investors are encouraged to obtain their own independent advice prior to buying participatory interests in CIS portfolios issued under the RMB CIS. Any investment is speculative and involves significant risks and therefore, prior to investing, investors should fully understand the portfolios and any risks associated with them.

Collective investment schemes in securities are generally medium to long term investments. The value of participatory interests may go down as well as up and past performance is not generally a guide to the future. The RMB CIS offers Exchange Traded Funds ("ETFs") that trade on an exchange. Trading in ETFs will incur the normal costs associated with listed securities, including brokerage, settlement costs, Securities Tax ("STT"), other statutory costs and administrative costs. The price at which ETFs trade on an exchange may differ from the Net Asset Value price published at the close of the trading day, because of intra-day price movements in the value of the constituent basket of securities.

Forward pricing is used and portfolio valuations take place at approximately 17h00 each business day. Instructions to redeem or repurchase must reach the CIS manager before 12h00 to ensure same day value.

CIS products are traded at ruling prices and can engage in borrowing and scrip lending. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. The Portfolio may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity.

Participatory interests are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any permissible deductions from the CIS portfolio divided by the number of participatory interests in issue.

A full detailed schedule of fees, charges and commissions is available from the CIS manager on request.
